Full Protection. Full Adventure. Full HD.

Samsung W200

Be ready for tough adventure with a rugged,
hardcore Pocket Cam, the Samsung W200.

Multi Proof

Designed to Withstand Water, Shock, and Dust

Capture a world of mystical underwater creatures, vibrant coral reefs or simply fun underwater with the overall rugged and sporty shape of the Samsung's Pocket Cam W200.

The Samsung W200 films sharp, brilliant moving pictures in up to 3 meters of water depth, repels dust and sand with its dust proof feature, and withstands shock making this camcorder the must-have item for all your adventures. Take it with you to the beach, pool, desert, mountain tops, anywhere your adventure takes you and capture every moment with the Samsung W200.

Aqua Mode

Simply Easier Filming

Filming underwater generally generates low quality videos due to dim lighting and static noise.

However, the Samsung W200's advanced technology and features- White Balance, Sound and Focus-specific to underwater environments helps you take clear, high quality videos. So, every video you take whether in or out of the water is perfect!

Aqua Mode

Normal Mode

Anti-fog Glass

Always clear for full enjoyment

Nothing is more frustrating than having your camcorder lens fog up when you come in from the cold or water.

The Pocket Cam, W200's lens with Anti-fog coating lets the steam disperse, so you always have clear, blur-free videos and pictures.

Self-Cleaning Glass

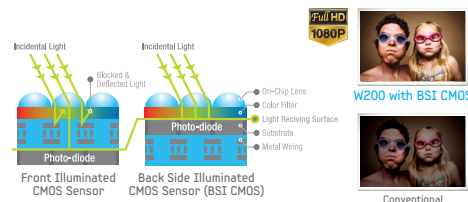

Non Self-Cleaning Glass

Video Quality

F2.2 Bright Lens & BSI CMOS Sensor

At an aperture of F2.2, the Bright Lens on the W200 camcorder offers a wider range of aperture steps compared to standard camcorders in its class. That gives you the ability to shoot at higher shutter speeds during low-light conditions for stunningly clear, sharp, blur-free images.

Samsung W200 HD camcorders use 30p/25p BSI(Back Side Illuminated) CMOS Sensors to deliver double the sensitivity of conventional CMOS Sensors, dramatically reducing image noise and distortion, and enhancing recording quality in low light conditions.

Record Pause

Any pause or intermission while shooting

The Samsung W200 is filled with a number of unique features, including Samsung's Record Pause. While shooting a video in Record Pause mode, it allows you to briefly pause the recording and then pick up right where you left off without creating a new file.

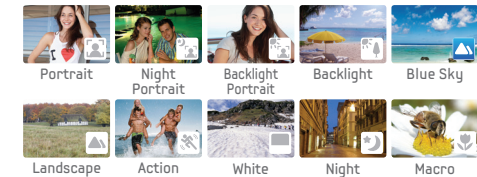

This way you only have one file to work with and don't have to merge files for editing, sharing or transferring. With the W200, recording your child's playoff baseball game and sharing it with your family has never been easier.

Smart Filter

Artistic effects for unique stills & movies

Get creative with your Samsung W200's Smart Filter feature. Smart Filter lets your creative imagination run wild with a wide range of color and lens effects to deliver an artistic edge to your videos and stills. The Miniature effect shrinks your subjects; Vignetting fades the edges of your shots; and the fun Fish-eye effect gives your videos a cool, distorted feel.

Built-in USB

On-the-go convenience in one compact camera

Tired of too many wires weighing you down? The Samsung W200 lets you connect anywhere without the inconvenience of having to carry extra cables.

It features a handy USB arm built right into the bottom of the camcorder so you can easily transfer videos to your notebook and share them with friends and family.

2.3" 230K Clear pixel LCD

Wide Viewing Angle

See exactly what you're recording from almost any angle. Sometimes when you're shooting a video, you're not always directly in front of the LCD screen.

The Samsung W200's LCD screen with Wide Viewing Angle lets you see images on the screen clearly whether you're looking at it from the side, above, or below, allowing for wider angle views with blind spots.

Full Protection. Full Adventure. Full HD.
